

SOP Dashboard - Admin

What this covers

- Creating/maintaining the **SOP Group** folder in WorkDrive (one folder per App/Group).
 - Uploading SOP files so employees can view them from the **SOP Dashboard**.
 - Locking down edits so only authorized users can create/sync folders or publish files.
-

Who should do this

- **SOP Admins** or **System Admins** with access to *ECE Time Tracker* and WorkDrive (optional).

Prerequisites

- You can access the report: **All Sop Groups**.
- You know the **Group/App name** you're creating an SOP folder for (e.g., *ExTra PH*, *ECETrack*).
- You know which parent WorkDrive category to use in **WD_Folder**:
 - **Support** – standard (default) support knowledge base
 - **General** – company-wide general SOPs

Note: On submit, the system creates the folder in WorkDrive and stores its ID in **WD_Folder_ID** automatically.

Where to start

1. Open the **All Sop Groups** report:
 - https://creatorapp.zoho.com/ececonsultinggroup/ece-time-tracker/?#Report:All_Sop_Groups
 2. Confirm you can see the existing rows (e.g., *Group*, *WD_Folder*, *WD_Folder_ID*).
-

Create a new SOP Group (new row)

1. Open the **All Sop Groups** report:
 - https://creatorapp.zoho.com/ececonsultinggroup/ece-time-tracker/?#Report:All_Sop_Groups
2. Click the **+** (plus) icon at the top-right of the report to open the **SOP Group** form.
3. In the form (see field screenshot):
 - **WD_Folder** (required): Select **Support** or **General**.
 - **Group** (required): Type the exact App/Group name (e.g., *ExTra PH*, *ECETrack*).

SOP Group

WD_Folder *

-Select-

Group *

Submit

Reset

4. Click **Submit**.
5. After a few seconds, return to the report and verify your new row:
 - **WD_Folder** shows your chosen category.
 - **WD_Folder_ID** is populated (folder created successfully). If it's blank, see **Troubleshooting** below.

Tips

- Use the report search to ensure the Group doesn't already exist before adding a new one.
- Group names should be unique and match the app/team naming convention exactly.

Verify the setup (very important)

- Return to the **All Sop Groups** report and find your newly added **Group**.
- Check that **WD_Folder** shows your chosen category.
- Confirm **WD_Folder_ID** is **not** empty.
- If present, the folder was created successfully.
- If empty after ~10–30 seconds, see **Troubleshooting** below.

Edit or update an existing Group

- **No edits allowed after creation.** Once a Group is created, both **Group** and **WD_Folder** are locked and cannot be changed.

If something is wrong

- Do **not** try to edit the record or create a duplicate.
- Submit a support ticket to request an admin action (retire/delete the incorrect Group and create a new one):
 - **Request Portal** → **Zoho Support Ticketing** (include the exact Group name and desired **WD_Folder**: *General* or *Support*).

Important

- Avoid duplicate **Group** names. Use the search bar to confirm the Group does not already exist before adding a new one.
- **WD_Folder_ID** is fixed after creation and is tied to the WorkDrive folder created for that Group.

How this works (for admins)

- On submit, the workflow uses **WD_Folder** to select the parent WorkDrive folder (e.g., *Support* vs *General*).
- The script then **creates the folder**, and saves its **resource ID** to **WD_Folder_ID**.
- Later automations (e.g., SOP uploads) use **WD_Folder_ID** to publish files and generate embed/permalink links.

Troubleshooting – SOP Group

1. WD_Folder_ID is blank

- Refresh the report. If still blank:
 - Ensure **WD_Folder** was set correctly.
 - Confirm your WorkDrive connection (**work_drive_zoho_files**) is active. (ask the dev)
 - Try editing and re-submitting the record.

2. “Duplicate group” or validation error

- Search the report for an existing row with the same **Group**. If found, **do not create a duplicate**. Users **cannot edit existing records** – contact the dev team or submit a **Zoho Support Ticketing** request to retire/adjust the existing row.

3. Permission or API error

- You might lack WorkDrive create permissions in the destination parent folder. Contact the dev team or submit a **Zoho Support Ticketing**.

4. Wrong parent folder

- Users **cannot edit** this field. Do **not** modify the record.
 - Submit a **Zoho Support Ticketing** request or contact the dev team to move the SOP Group to the correct parent (change control required).
-

Create a new SOP (File Upload)

Prerequisites

- The target **SOP Group** already exists (created via *All Sop Groups* above).
- Your document is a **PDF** (only PDF is allowed).

Steps

1. Open the **All Sops** report:
 - https://creatorapp.zoho.com/ececonsultinggroup/ece-time-tracker/?#Report:All_Sops
2. Click the **+** (plus) icon at the top-right to open the **SOP** form.
3. Fill the fields:
 - **Title** (required): Short, clear name of the SOP.
 - **SOP Access** (required): Choose **General** or **Support**.
 - **SOP Group** (required): Select the correct Group for this SOP. (If the list is disabled, pick **SOP Access** first.) If the Group you need isn't listed, go back and create it in **All Sop Groups**.
 - **Document** (required):
 - Upload the PDF file (only upload files of size up to 250MB).

SOP

Title *	
SOP Access *	-Select- ▼
SOP Group *	-Select- ▼
Document *	Select File 

Please upload PDF file only.

Submit

Reset

4. Click **Submit**.
5. Verify in the report that your new SOP appears. (Back-end automation uploads the PDF to the Group's WorkDrive folder and stores references as configured.)

Notes

- Do **not** create duplicate SOPs for the same title and group. Use search first.
- If the wrong group/access was selected, submit a support ticket to request correction (editing may be restricted).

Verify the setup (very important)

After submitting, open **All Sops** and confirm:

- The new SOP row is visible with the correct **Title, SOP Access, and SOP Group**.
- The file opens/preview works from the row's link/button (permalink/embed).
- Any WorkDrive reference fields (e.g., **Resource_ID, Permalink/Embed URL**) are populated.
- The file name and size look correct.

If any of these are missing or broken, see **Troubleshooting** below.

Edit or update an existing SOP (SOP – File upload)

Allowed change: You can **replace the PDF** (Document). **Title, SOP Access, and SOP Group are locked** after creation.

Steps to replace the PDF:

1. In **All Sops**, open the target SOP row.
2. Click **Edit**.
3. In **Document**, choose the new PDF.
4. Click **Submit**.

Notes

- The system replaces the existing file in WorkDrive (keeps the same Group folder). Links remain valid.
- Do **not** change the Title to create a “new” version; use file replacement instead.
- If Access/Group is wrong, submit a support ticket for admin correction.

How this works (for admins)

- On creation, the workflow looks up the Group's **WD_Folder_ID** and uploads the PDF to that WorkDrive folder.
- The script publishes/updates permissions as configured and saves references (e.g., **resource_id**, **permalink/embed URL**).
- On edit (file replacement), the script updates the WorkDrive file (or re-uploads and updates references) without changing the Group folder.
- Version history can be tracked in WorkDrive if enabled.

Troubleshooting – SOP File Upload

1. Upload blocked: “PDF only”

Convert your document to PDF and re-upload.

2. SOP doesn't show a link / link broken

Refresh the report; if still missing, check the Group's **WD_Folder_ID** exists. If the Group row lacks **WD_Folder_ID**, fix the Group first (admin).

3. Wrong Group or Access selected

Do not edit fields. Submit a support ticket to request admin correction.

4. File replaced but old content shows

Clear browser cache/preview, or open the permalink in a new tab. WorkDrive previews may take a moment to refresh.

5. Duplicate SOP

Use search before adding. If a duplicate exists, request admin to retire the extra record.

6. Permission/API error

You may not have rights to upload to the Group's WorkDrive folder, or the WorkDrive connection is inactive. Contact an admin.

Final check: Verify in SOP Dashboard

The dashboard uses a **sidebar-only** list for SOP visibility. There are **no filters or widgets** to validate here.

Home content (what you should see)

- **Page header:** *Home*.
- **Left sidebar:**
 - **SOP – Dashboard** section with **Home**.
 - **Group** sections are expandable/collapsible.
- **Main panel (Home):**
 - A **card per Group** (e.g., *ECETrack*) showing the **item(s) count**.
 - Each card lists **up to 10** SOP titles visible to the current user (General is always visible; Support appears for Support/Admin users).
 - A **VIEW ALL** button sits at the **bottom-right** of the card and navigates to the **full SOP list for that Group**, scoped to the user's access level.
 - If a group has no SOPs yet, it won't appear on the Home section.

Sidebar presence

1. Open the **SOP Dashboard** in *ECE Time Tracker*.
2. Check the **sidebar**:
 - Confirm the **new SOP (file upload)** appears **by Title** under the correct section (**General** or **Support**).
 - **Support users can see the General section** in addition to Support (per policy). General-only users will not see Support.
3. If the SOP title doesn't appear in the sidebar:
 - Re-check the record in **All Sops** (Title, Access, Group).
 - Verify the selected **SOP Group** exists and has a **WD_Folder_ID** in **All Sop Groups**.
 - See **Troubleshooting – SOP Group** and **Troubleshooting – SOP File Upload** above.

Link integrity & metadata

- On the dashboard, newly added SOPs display **only as titles in the sidebar** under **General** and **Support**.
- Clicking a title should open the SOP file from Workdrive in SOP Dashboard.
- Additional metadata (timestamps, uploader, SOP Group/Access labels) are **not shown** in the sidebar list.

Request help

- **Submit a ticket** if you're experiencing an issue or have a suggestion:

https://creatorapp.zoho.com/ececonsultinggroup/request-portal#Form:Zoho_Support_Ticketing

Change log

- **v1.0** – Initial release of steps to create SOP Folder via *All Sop Groups* report.
